

# Cooling Systems Division

Nobumasa Kodama

The main product development of the Cooling Systems Division in 1995 ranges from Long Life Fan for equipment cooling which require high reliability and long life, fans equipped with various types of sensor and "SAN ACE MC", which is a fan embedded in heat sink for cooling microprocessors (CPU), which are the central processing devices of a computer. These new products complement our existing fan products, which enjoy a good reputation for excellent reliability and performance, and will open new markets in a wide range of applications.

■ CPU Cooler "SAN ACE MC"

■ Long Life Fan

■ Various Fan Sensors
